

Informatica Implementation Guide

Document Information

Field	Value
Document Title	[Organization Name] Informatica Implementation Guide
Version	1.0
Effective Date	[Insert Date]
Review Date	[Insert Date - Recommend Annual]
Owner	[Technical Data Steward / Integration Lead]
Approved By	[Chief Data Officer]
Classification	Internal Use

Important: This guide provides organization-level configuration guidance aligned with the governance framework in this repository. Always follow Informatica's official documentation and your license/support agreement for product-specific instructions, as features and UI vary by product (e.g., IDMC, EDC, IDQ) and version.

Purpose

This guide maps [Organization Name]'s data governance framework onto an Informatica implementation (e.g., Enterprise Data Catalog, Data Quality, and PowerCenter/IDMC integration components), ensuring the toolchain reinforces the governance program defined in this repository.

1. Scope of Implementation

Informatica capabilities typically support three governance functions:

- **Metadata Catalog & Lineage** (Enterprise Data Catalog / EDC)
- **Data Quality** (Informatica Data Quality / IDQ)
- **Integration / ETL** (PowerCenter or Informatica Intelligent Data Management Cloud)

Confirm which modules are licensed before planning configuration scope.

2. Pre-Implementation Checklist

- ☐ Data Governance Charter and Classification Scheme finalized
- ☐ Pilot domain and source systems identified (per Implementation Roadmap)
- ☐ Source system credentials and network access provisioned for scanning/profiling
- ☐ Data Quality Rules Library translated into target rule definitions for IDQ (or equivalent)

3. Metadata Catalog Configuration

- ☐ Configure source system scanners for each system in the pilot domain (database, file system, BI platform)
- ☐ Schedule recurring scans aligned to the Metadata Management Procedures (technical metadata refresh cadence)
- ☐ Map discovered technical metadata to the `data\_assets` and `data\_elements` schema used in this repository's catalog tables
- ☐ Configure business term association so glossary terms link to physical assets

4. Lineage Configuration

- ☐ Enable automated lineage harvesting for supported source systems and ETL jobs
- ☐ For custom/legacy ETL not natively supported, supplement with manually documented lineage from Data_Lineage_Mapping_Templates.xlsx or automated discovery via Data_Lineage_Discovery_Tools.py
- ☐ Validate end-to-end lineage for at least one critical reporting path before relying on it for compliance reporting

5. Data Quality Configuration (IDQ)

- ☐ Translate rules from the Data Quality Rules Library (completeness, validity, uniqueness, consistency, timeliness, accuracy) into IDQ rule objects
- ☐ Configure scorecards at the asset and Critical Data Element level
- ☐ Schedule rule execution aligned to source data refresh cadence
- ☐ Configure quality score thresholds matching the SLA logic in Compliance_Reporting_Scripts.sql (95% = Compliant, 85-94% = At Risk, <85% = Non-Compliant)

6. Integration / ETL Standards

- ☐ Establish naming conventions for jobs/mappings that align with the `process\_name` field used in lineage tracking
- ☐ Require all new ETL/ELT development to register source-to-target mappings in the catalog (manually or via automated lineage harvesting)
- ☐ Apply change management approval (see Metadata Management Procedures) for any mapping change affecting governed Critical Data Elements

7. Role and Access Configuration

Governance Role	Informatica Role/Capability
Data Governance Office	Administrator
Technical Data Steward	Catalog Steward / Asset Owner
Business Data Steward	Business Glossary Steward (read/comment access to technical catalog)
Developers/Integration Team	Mapping/Workflow Developer

8. Monitoring and Reporting

- ☐ Configure operational dashboards for job success/failure rates feeding into KPI Dashboard Templates
- ☐ Configure data quality scorecard exports into the Monthly Governance Report Template
- ☐ Configure alerting for quality rule failures on Critical Data Elements, routed per the Data Issue Resolution Process

9. Rollout Checklist

- ☐ Pilot domain scanned, profiled, and quality rules executing successfully
- ☐ Lineage validated end-to-end for at least one critical reporting path
- ☐ Technical Data Stewards trained on catalog and quality tooling (Data Steward Training Curriculum, Module 3)
- ☐ Production cutover scheduled per the Implementation Roadmap

Document Control:

- This is a template document requiring customization for your specific Informatica product suite and version
- Always consult official Informatica documentation and your Informatica support team for product-specific steps
